

MODEL 764P / PD

PRESSURE CONTROLLERS

Model 764P

The Models 764P and 764PD are pneumatic pressure controllers. They measure the controlled or differential pressure and develop an output signal that varies linearly with changes in the controlled pressure. The 764P controls pressure between 30" Hg vacuum and 2500 psig (760 mm Hg Vac. and 172.4 Barg) using six ranges. The 764PD variation controls differential pressures between 1 and 150 psid (.07 and 10.3 Bard) using three ranges.

FEATURES

- Adjustments:** Proportional band and setpoint.
- Diaphragm Seals:** Available for corrosive fluids.
- Field Reversible:** Easily changed from direct acting to reverse acting.
- Small Size:** Easily supported at process piping connection.
- Gauge:** 1-1/2" (38 mm) output signal gauge.

APPLICATIONS

Suitable for use on air, inert gases, liquids and steam applications.

SPECIFICATIONS

Control Ranges: Model 764P
 2"–30" Hg Vac. (50–760 mm Hg Vac.)
 1–30 psig (.07–2.1 Barg)
 20–100 psig (1.4–6.9 Barg)
 50–150 psig (3.5–10.3 Barg)
 90–500 psig (6.2–34.5 Barg)
 450–2500 psig (31.0–172.4 Barg)

Model 764PD
 1–30 psid (.07–2.1 Bard)
 20–100 psid (1.4–6.9 Bard)
 50–150 psid (3.5–10.3 Bard)

Sensing Diaphragm: Beryllium copper, ASTM B194.
 Alloy 25 – half hard is standard.

 316 SST wetted parts – uses a 316 SST cover, or covers, on the beryllium copper diaphragm.

Vent Screen: Brass, 1/8" NPT (764P only).

Diaphragm Casing Materials:

Cast iron – ASTM A126, Class B.
 316 SST – ASTM A479.

The non-pressurized lower diaphragm case of the 764P is cast iron on all units, except the 2500 psig (172 Barg) units use steel.

For process fluid wetted parts, see Table 1 for Model 764P. See Table 2 for Model 764PD.

Maximum Static Pressure: See Tables 1 and 2.

Ambient Temperature Range: -20° to +180°F (-28.5° to +82.5°C).
 Steam service requires a pigtail siphon in the sensing line to keep the diaphragm's O-ring seal cool.

Control Housing Sub-Assembly: Brass housing, Buna-N O-ring seals, SST adjusting screws, etc.

 (2"–30" Hg Vac.,
 1–30 psig and 50–150 psig are similar)

Diaphragm
 Sub-Assembly
 for 90–500 psig

Diaphragm Sub-Assembly
 for 450–2500 psig

**TABLE 1
 MODEL 764P PROCESS FLUID WETTED PARTS**

Pressure Range "Hg Vac./psig (mm Hg Vac./Barg)	Diaphragm	Diaphragm Case	O-Ring Seal	Max. Static Pressure	
				psig	(Barg)
2"–30" (50–760 mm) 1–30 (.07–2.1)	Beryllium Copper	Cast Iron	Buna-N	250	(17.2)
	316 SST Cover	316 SST	TFE	250	(17.2)
20–100 (1.4–6.9) 50–150 (3.5–10.3)	Beryllium Copper	Cast Iron	Buna-N	300	(20.7)
	316 SST Cover	316 SST	TFE	300	(20.7)
90–500 (6.2–34.5) 450–2500 (31.0–172.4)	316 SST Cover	316 SST	TFE	750	(51.7)
	316 SST Cover	316 SST	TFE	3000	(207)

Output Signal: 3–15 psig (0.2–1.03 Barg).
6–30 psig (0.4–2.1 Barg).

Supply Pressure: 18–20 psig (1.2–1.4 Barg) for 3-15 psig output; 32–35 psig (2.2–2.4 Barg) for 6-30 psig output.

Output Signal Gauge: 0–30 psig (0–2.1 Barg) range for 3–15 psig output signal; 0–60 psig (0–4.1 Barg) for 6–30 psig output signal.

Diaphragm Casing Connections: 764P and 764PD – Upper case (center) – 1/4" NPT, lower case – 1/8" NPT.

Supply and Output Signal Connections: 1/4" NPT female pipe connections.

Sensitivity: Better than 0.05% of sensing diaphragm span.

Repeatability: ±0.2% of sensing diaphragm span.

Sensing Diaphragm Span:

Pressure Range		Span
"Hg Vac/psig (mm Hg Vac Barg)		psig (Barg)
2"–30"	(50–760mm)	30 (2.1)
1–30	(.07–2.1)	30 (2.1)
20–100	(1.4–6.9)	100 (6.9)
50–150	(3.5–10.3)	100 (6.9)
90–500	(6.2–34.5)	500 (34.5)
450–2500	(31.0–172.4)	2500 (172.4)

Proportional Band:

Adjustable 3–20% of sensing diaphragm span with 18–20 psig (1.2–1.4 Barg) supply. Proportional band doubles for 6-30 psig (0.4-2.1 Barg) output signal with 35 psig (2.4 Barg) supply pressure.

Steady State Air Consumption:

Output Signal					
3-15 psig (0.2-1.03 Barg)			6-30 psig (0.4-2.1 Barg)		
Flow Rate *		Prop. Band %	Flow Rate *		Prop. Band %
SCFH	(M ³ /Hr)		SCFH	(M ³ /Hr)	
4.2	(0.12)	3	4.2	0.12	6
50	(1.41)	20	80	2.27	40

* Mid-span at proper supply pressure.

50–150 (3.5–10.3)	316 SST Cover	316 SST	316 SST	TFE & FC Elast	300 (20.7)

FC Elast = Fluorocarbon Elastomer

OPTIONS

Option -23: Bracket Mounting. Utilizes a steel bracket with two steel machine screws for mounting the 764 controller to the actuator of a control valve or a fixed structural appendage.

Option -29: Tapped Connection. 1/4" NPT female connection on center of diaphragm case. **NOTE: This feature has been updated and is now included with standard construction.**

Option -75: Diaphragm Seals. An Ashcroft Type 300 diaphragm seal is available with the 764P to protect the sensing diaphragm from corrosive fluid attack. The diaphragm seal is close mounted to the 764P with a 1/4" steel pipe nipple. The lower housing process connection is 1/2" female NPT. (See Ashcroft Bulletin DS-1 for complete technical information.)

Materials

Upper Housing: Steel.
 Lower Housing: 316SST, Carpenter 20, Monel 400 or Hastelloy C.
 Clamps & Bolts: Steel.
 Diaphragm Seal: TFE or Fluorocarbon Elastomer.
 Fill Liquid: Glycerine, Silicone or Halocarbon.

Figure 3

DIAPHRAGM SEAL –
PROCESS PRESSURE/TEMPERATURE

Diaphragm Seal Mat'l.	Fill Liquid	Pressure psig (Barg)	Temperature °F (°C)
TFE	Glyc.	2500 (172.4)	0+400 (-17 to +204.8)
	Sil.		-40+400 (-40 to +204.8)
	H.C.		-40+300 (-40 to +149.2)
Fluorocarbon Elastomer	Glyc.	500 (34.5)	0+400 (-17 to +204.8)
	Sil.		-40+400 (-40 to +204.8)
	H.C.		-40+300 (-40 to +149.2)

ACCESSORIES

Volume Booster: 1:1 ratio for improving the stroking speed of diaphragm motor valves when no positioner is used. Incorporates a stabilizing bypass needle valve between input and output (Moore Products – Model 61H).

Air Filter Regulator: Model 5100P is nipple mounted to the supply port with a 1/4" NPT brass nipple. A 1-1/2" (38 mm) supply pressure gauge is included.

Mounting on a Control Valve: Factory mounted, using a bracket and impolene tubing, on the Ranger, Premier, Model 987, Model 964, Model 988 and Model 2266 valves with or without positioners. The 764P/PD can be pipe nipple mounted on the same valve actuator casings listed above when used without positioners.

PRINCIPLE OF OPERATION

The 764 controllers employ laminar flow to produce the 3–15 psig (nominal 0.2–1.0 Barg) output signal. Laminar flow eliminates the need for range springs, levers, pivots and other parts that produce friction and lost motion.

The sensing diaphragm in the 764P and 764PD, has a high spring rate and any change in the sensed pressure produces a minute diaphragm movement which strokes the sensor plate. The sensor plate, in turn, throttles the flow of instrument air through the sensor to develop the 3–15 psig (0.2–1.0 Barg) output signal.

On direct acting controllers (see Figure 4) the supply air enters PORT A and passes through the proportional band restriction. With an increase in the controlled pressure the flow through the sensor is reduced which increases the output signal. The proportional band restriction regulates the flow rate of supply air into Port A. PORT B is the exhaust port.

On reverse acting controllers (see Figure 5) the supply enters PORT B (not Port A). With an increase in the controlled pressure the supply air flowing through the sensor decreases, which reduces the output signal. The proportional band restriction regulates the flow of exhaust through Port A.

Closing the proportional band adjusting screw reduces the proportional band. Opening the screw increases the proportional band.

The set point adjustment positions the sensor so the diaphragm must deflect its maximum for its highest controlled pressure and hardly deflects for the lowest controlled pressure.

Using a 764P/PD controller to produce a 6–30 psig (0.4–2.1 Barg) output signal operates similarly, but at higher air consumption levels.
